

Beat Google – Food Search

GROUP 21 呂侑軒、賈雲翔、吳昀蓁、蔡依辰

Project Interests

Scope Expansion

- Originally focused on a narrow topic: “Cake”
- Concerned about limited scope affecting search accuracy
- Expanded topic to “Food” to gather richer and more diverse data

Project Interests

Real-Life Relevance

- Food is a familiar and essential part of daily life
- Campus often called a “food desert”, creating real demand for food searches
- Project connects with everyday life, enhancing practical value

Project Interests

Multicultural & Multilingual

- Food represents diverse cultures and cuisines worldwide
- Ideal for showcasing multilingual input and processing capabilities
- Strengthens system applicability across cultural contexts

Search Tricks

① RELATED KEYWORD SEARCH:

General Google Search + Google Search Results "Related Searches"
Keyword Process

1. Extract the "Related Searches" section from Google
2. Organize and consolidate the related search keywords
3. Incorporate them as bonus points
4. => Strengthen the webpage content relevance

Search Tricks

② CALCULATE WEBPAGE SCORES AND SORT

1. Recursive webpage expansion
 2. Keyword score calculation
 3. Result sorting and output
- => Prioritize displaying results with high relevance to the input content and topic

Search Tricks

② CALCULATE WEBPAGE SCORES AND SORT

Score Calculation:

1. Weighted accumulation using post-order traversal
 2. Topic relevance judgment
- => The influence of deep content decreases by level, making output more aligned with search intent

Different score weights

=> Webpage results better match actual search needs

Search Tricks

③ MULTILINGUAL PROCESSING

Issues:

When webpages input languages other than English, garbled text or unrelated content may appear.

Improvement Approach:

Use LLM for multilingual translation + unify processing with English keywords.

Search Tricks

3 MULTILINGUAL PROCESSING

Processing Rules:

1. Semantic translation — to facilitate searching
2. Noise filtering — to avoid affecting keyword judgment
3. Keyword supplementation — to strengthen topic connection
4. Non-topic identification — to prevent results from deviating off-topic
5. Garbled text and unrecognizable input — to ensure smooth system operation
